Findings show a sharp decline in youth e-cigarette use with 1.8 Million fewer users since last year.

However, due to alarming increases since 2011, the number of current youth e-cig users remains concerningly high: 3.6 Million.

Among high school current e-cig users: 38.9% use e-cigs frequently and 22.5% use e-cigs daily.

Disturbingly high rates of frequent and daily e-cig use suggest STRONG DEPENDENCE ON NICOTINE.

More than 8 out of 10 current youth e-cig users use flavored e-cigs.

Despite the positive change from last year, youth use of e-cigarettes remains a PUBLIC HEALTH CRISIS affecting children, families, schools and communities.

FDA will continue to address this crisis by:

- Enforcing minimum age of 21 to purchase tobacco products
- Prioritizing enforcement against youth-appealing products
- Educating the public
- Conducting thorough product reviews

Note: All numbers presented here are estimates.
